

FOR IMMEDIATE RELEASE

AMBIMEDINC MODIFIES INJECT-EASE TO MAKE IT COMPATIBLE WITH ABBVIE'S HUMIRA PRE-FILLED SYRINGE FOR THE TREATMENT OF RHEUMATOID ARTHRITIS

Capitola, California – June 12, 2014 – AmbiMedInc, Manufacturer of Inject-Ease, a device that makes injections easy and comfortable, announced modifications to its product making it compatible with AbbVie's Humira pre-filled syringe for use in the treatment of Rheumatoid Arthritis as well as other polycarbonate and glass pre-filled syringes that are of similar dimensions.

The Inject-Ease is an auto injector, usable for subcutaneous self-injections and is designed to make injections easy and comfortable. The syringe is simply loaded in the Inject-Ease then the tip of the device placed against the skin and rotated to create less feeling when the needle goes into the skin. A button is pressed to automatically deliver the needle through the skin and the user inserts the medicine.

When using the Inject-Ease, one does not see the needle thus reducing anxiety. Pain is minimized by the twisting of the tip on the skin and when the button is pushed, the needle is inserted into the skin rather than the patient doing it.

The Inject-Ease is reusable and is ideal for anyone who has a fear of needles. It is designed for one hand use allowing access to hard to reach injection sites and is a supreme learning tool for the new patient.
