FOR IMMEDIATE RELEASE

AMBIMEDINC RELEASES INSUL-EZE – A NEW HELPFUL PRODUCT FOR THE GROWING AGING POPULATION WHO SELF-INJECT

Capitola, California – June 14, 2016 – As the large baby boomer population increases in age they begin to experience a myriad of medical problems including diabetes, rheumatoid arthritis, and impotence. Many of these disorders require self-injections that are difficult to do because of poor vision and/or limited dexterity. AmbiMedInc, Designer and Manufacturer of World Class Medical Devices developed the **Insul-eze** syringe magnifier to aid in the loading of the syringe, increasing the medical independence of our aging population.

The **Insul-eze** is a sturdy one-piece syringe magnifier that holds the syringe and medication bottle in place while magnifying the calibrations over two times for easy reading.

Recent modifications allow most medication bottles to securely snap into place while a channel on the underside accommodate most 1 ml or smaller syringes, effortlessly aligning the needle into the bottle top. A sturdy base prevents rolling, creates stability and allows the magnifier, syringe and bottle to be secure for easy loading, viewing and ease of use. The product can also be affixed to a counter or refrigerator with Velcro or magnet to allow one-handed loading of the syringe.

The **Insul-eze** receives astounding praise from the Educator community and many “thank you” emails from those who use the Insul-eze. This email from Dorothy C. says it all, *“this little gadget is the best thing that could have been made to help people fill their syringes with insulin and get an accurate reading with the magnifying part to get the right doses.... he would not have been able to do the filling of his syringes by himself.”*

About AmbiMedInc
